Q&A

Data Transition Validation

What is Data Transition Validation tool?

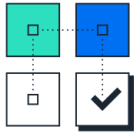

DTV Teaser Video: [DTV Teaser Video](#)

DTV Learning Journey: [Mastering the Data Transition Validation Tool](#)

Features & Benefits

Why to use Data Transition Validation tool?

Features

Technology & Integration

- ABAP-based tool
- Part of SAP BASIS component

Installation & Content

- Easy installation via TCI
- Loaded with pre-delivered content

User Experience

- Highly intuitive user interface

Compliance

- In line with SAP security standards

Benefits

Reliable mechanism for huge amount of business data validation

Validation support for SAP reports and transactions

Validation support for custom and custom name space reports

Validation support for transparent tables

Downtime reduction by eliminating manual spot check activities

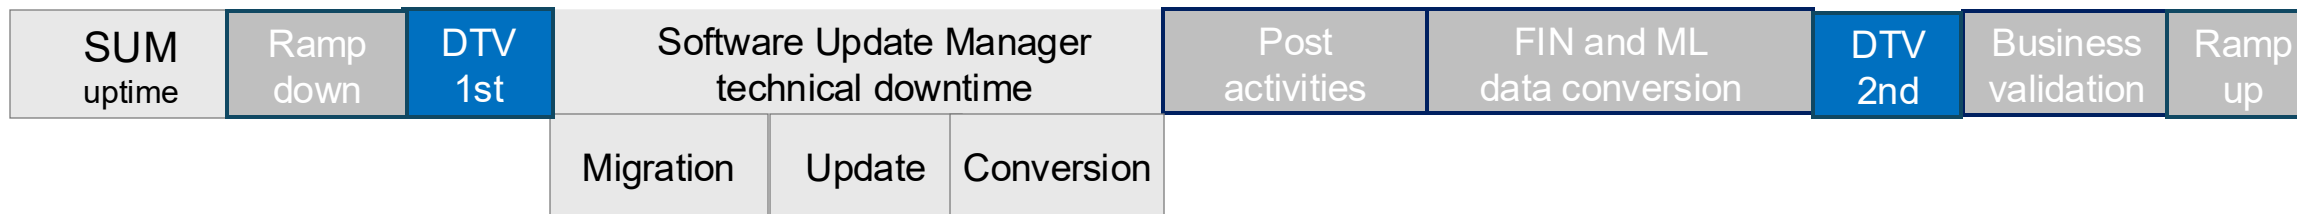

Easy to use self service tool & comes with no additional cost

Data Transition Validation Tool Handling: System Conversion

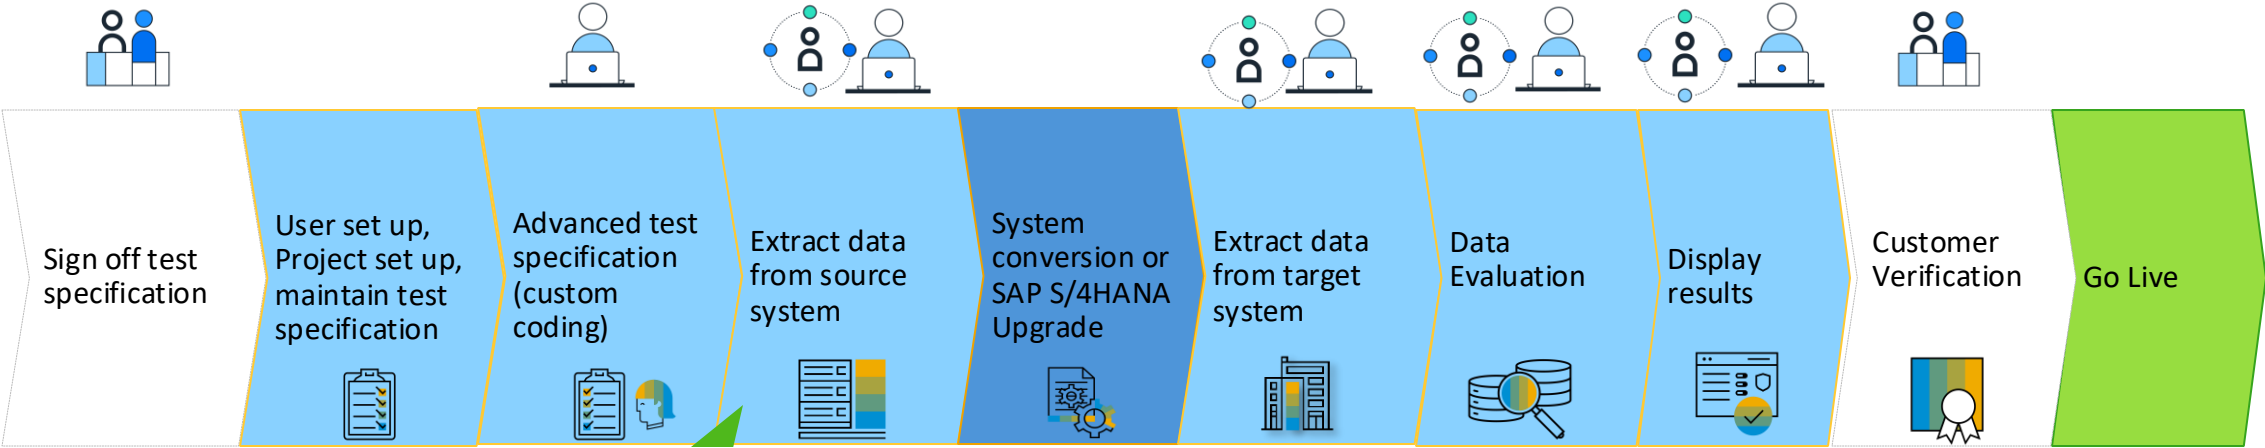

When to use Data Transition Validation tool in system conversion scenario?

- Implement TCI-based SAP Notes in the SAP ECC source system
- Start the tool to define the scope of validation
- Run the conversion until start of downtime
- Create the first data extract (1st snapshot) after Ramp-Down (users logged off, reconciliation jobs done)
- Continue downtime activities of conversion
- Create the second data extract (2nd snapshot)
- Compare the results
- Continue remaining conversion activities

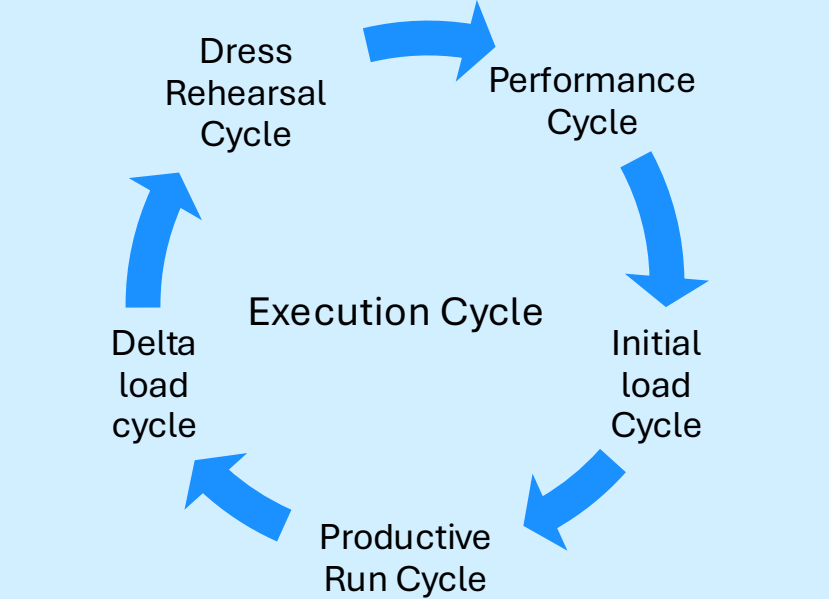

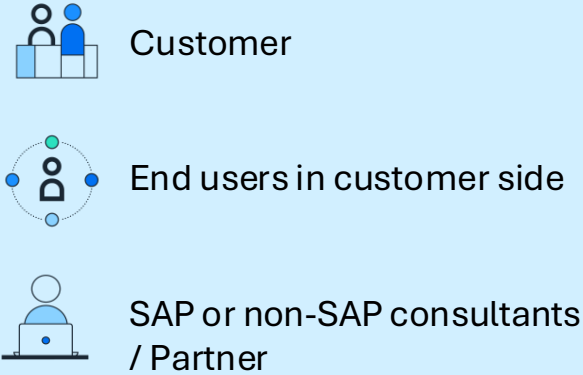

Process Steps

How do I use the tool?

Persona

Legend

- Process mainly driven by the user using DTV tool
- Process mainly executed by SAP/SAP consultants
- Steps not part of DTV tool. Done by customer / consultants
- Process driven by expert user/ Consultants/ Partner

Data Transition Validation Best practices

Best practices to follow during implementation

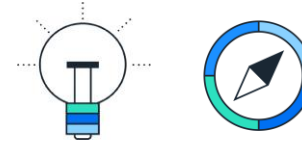

Project Planning

- ✓ Understand DTV scope
finalize the test scope
- ✓ Finalize the data scope
- ✓ Include DTV tool in each
cycle of the project

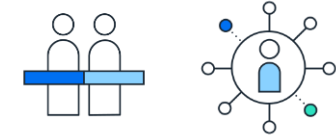

System Preparation

- ✓ Use the latest and
greatest version of the
DTV tool
- ✓ Ensure to implement all
the DTV related SAP Notes
- ✓ Maintain optimal
background jobs
- ✓ Make sure to maintain
recommended values for
SHMA configuration and
memory parameter set up
(RZ11)

DTV Configuration

- ✓ Split the data into
smaller chunks
- ✓ Use simulation, until
you find the right split
size
- ✓ Ensure not to change
the global parameter in
the target system
- ✓ Ensure to define same
input parameters for
source and target
system

DTV Execution

- ✓ Avoid duplicate extraction by
using Import Simulation Results
feature
- ✓ Post execution, in case of
discrepancies run the report in
SE38 with same input
parameters to cross check

Data Transition Validation Demo

Demo

Customer Statistics

Details on DTV usage from other customers

No of test variants	Total volumes Migration	Test Scope	Source Extraction	Target extraction and evaluation	Remark	Validated Business Area
120	45 TB	Full system scan : all company codes over all the years , All Plants	~2hrs	~3hrs	Additional system resources added	FXA, FIN, GL , MM, GRIR, WM, PLM
26	22 TB	All company codes over last 3 Years	26 mins	40 mins		FXA, FIN , MM
33	18 TB	All company codes over all the years	40 mins	~ 1 hr	Additional custom validation tool used	FXA, FIN, GL , MM, GRIR, WM, PLM

Customer Feedbacks:

“Such a large volume of data did match in the tool was a comforting fact for IT and the Finance Management team”

“DTV tool has a lot of potential and benefits. Already this has saved us 3 times by finding discrepancies during our dress rehearsals”

“DTV worked very well and provided us with a high level of confidence and significant time saving. In summary, we can say that manually extracting and comparing the data would have taken significantly longer and would have greatly reduced our time buffer for the Go Live..”

Roadmap

Data Transition Validation Roadmap

- Auto Propose – Split Parameters
- Advance Rules & Filters
- Automatic Data Transfer
- Version Configuration
- More intuitive summary screens
